

## Overview

The SUPERCAGE™ is the latest innovation from Samson Equipment designed for the safe movement of large, heavy or high value goods without the need for complex slinging methods.

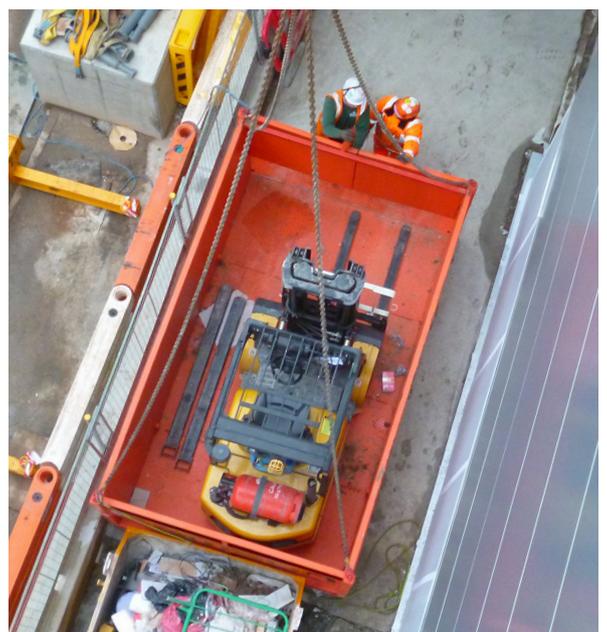

Fully enclosed solid steel sides and high level crane attachment points ensure a safe and stable lift whatever the characteristics of the load.

The huge 13.2 cubic metre cargo area and 5 tonne load capacity also makes the Supercage ideal for lifting multiple packs of palletised goods in one go, massively increasing tower crane efficiency on the job site.

Double gates both ends of the cage allow for easy loading and unloading of long lengths of materials by site operatives and a drop down ramp provides smooth access for forklifts or pallet trucks.

Internal lashing points help to keep loose items secure within the cage and a top rail with ratchet strap anchor points provide extra stability when needing to lift tall objects with the SUPERCAGE.

### Super safe lifting of heavy, high value goods

**Technical specification**

**Super stable**

High level lifting eyes ensure that even the most awkward shaped loads remain well within the triangle of stability resulting in a safe and level lift every time.

**Super safe**

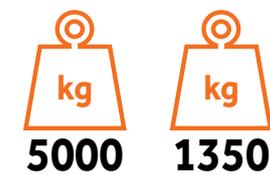

Solid steel sides, double locking gates and internal load lashing points keep loads safe and secure during lifting.

External length (Inc. ramp)    External width    External height (Inc. lifting eyes)

Internal length    Internal width    Internal height

Load capacity    Self weight
